## Computer Vision and Image Processing Technologies

### Message from the Guest Editor

The computer vision and image analysis community has developed several technologies that are being used by the common mass of people and researched by the highly developed intelligentsia of the world. Deep learning together with computer vision and image analysis have achieved amazing results in terms of object detection and classification, along with several other problems like image segmentation. The topics include but not limited to

- Vision for teaching and learning
- Vision for human-computer interaction
- Object recognition and classification
- Multiple object tracking and behavior analysis
- Scene analysis and context development
- Deep learning for computer vision applications
- Human, animal, plant phenotyping
- Embedded vision technologies

## About the Journal

### Message from the Editor-in-Chief

*Technologies*, provides a single focus for reporting on developments of all technologies, regardless of their application. It is our intention that *Technologies* becomes the journal of choice for both researchers wanting to publish their work and technologists wishing to exploit the high quality research across a wide range of potential applications. Through its open access policy, its quick publication cycle, *Technologies* will facilitate the rapid uptake and development of the research presented, ultimately providing benefit to the wider society.

### Author Benefits

#### High Visibility:

indexed within ESCI (Web of Science), Scopus, Inspec, Ei  
Compendex, INSPIRE, and other databases.

#### Journal Rank:

JCR - Q1 (Engineering, Multidisciplinary) / CiteScore - Q1  
(Computer Science (miscellaneous))

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is  
provided to authors approximately 21.8 days after  
submission; acceptance to publication is undertaken in 3.9  
days (median values for papers published in this journal in  
the first half of 2025).
