Thermal Processes and Thermal Properties of Sustainable Polymeric Materials

Guest Editors:

Prof. Dr. George Z. Papageorgiou

Department of Chemistry,
Aristotle University of
Thessaloniki, GR-54124
Thessaloniki, Greece

Prof. Dr. Johan Jacquemin

Materials Science, Energy, and
Nano-Engineering MSN
Department, Mohammed VI
Polytechnic University, Hay
Moulay Rachid, Lot 660, Ben
Guerir 43150, Morocco

Deadline for manuscript
submissions:

closed (10 July 2025)

Message from the Guest Editors

Natural polymers like wood, wool, and cotton cellulose have long been used by humans, providing heat through wood combustion. Sustainable polymeric materials have gained interest lately. Polymer processing involves mass transfer, heat transfer, flow, and deformation. Heating softens the polymer, while cooling or crosslinking sets the shape. The relationship between processing, structure, properties, and performance is a key focus in polymer science. Moreover, pyrolysis of biomass or polymeric waste offers new pathways for fuel, monomer, and chemical production. Thermal analysis techniques like DSC and TGA study polymer thermal properties and processes.

Topics include but are not limited to:

- Thermal properties of polymers
- Thermal processes of polymers
- Thermal analysis of polymers
- Crystallization and melting of polymers
- Thermal degradation of polymers
- Thermo-oxidative degradation of polymers
- Thermal polymerization
- Pyrolysis of biomass or polymer wastes
- Thermochemical conversion of biomass
- Heat transfer
- Thermodynamics of polymer processing
- Thermochemical processes in biorefineries
- Combustion

Message from the Editor-in-Chief

Thermo (ISSN: 2673-7264) is an international, peer-reviewed, and open access journal that publishes original research papers, reviews, and Special Issues dealing with experimental, theoretical, and applied thermal sciences. Both theoretical (simulation) and/or experimental research papers within our journal's scope are of particular interest, including satellite-related topics considering thermophysics, solubility phenomena, chemical thermodynamics, and chemical engineering. We encourage scientists to publish their results in as much detail as possible, and there is no restriction on the maximum length of papers. We greatly appreciate suggestions for enhancing the journal.

Author Benefits

Open Access: free for readers, with **article processing charges (APC)** paid by authors or their institutions.

High Visibility: indexed within **ESCI (Web of Science)**, **Scopus**, **EBSCO**, and **other databases**.

Journal Rank: JCR - Q2 (Thermodynamics)

Rapid Publication: manuscripts are peer-reviewed and a first decision is provided to authors approximately 26.1 days after submission; acceptance to publication is undertaken in 3.5 days (median values for papers published in this journal in the second half of 2025).
