Advances of PET-CT Imaging in Oncology

Message from the Guest Editor

Over the last decade, molecular imaging has remarkably improved the monitoring and management of oncological patients. In particular, PET-CT is a sensitive imaging modality that represents one of the pillars of molecular imaging in oncology, and has become fundamental for response evaluation in several tumor types. We are entering an exciting new era where innovations in PET-CT may bring new clinical opportunities and therapeutic strategies. This Special Issue aims to summarize the most promising clinical applications and improvements in PET-CT imaging. Original research articles and reviews with particular interest in PET-based treatment response and PET applications in the theragnostic field are welcome, emphasizing (but not limited to) the present and future role of PET-CT imaging in prognosis, treatment response and disease relapse in oncology. We look forward to receiving your contributions.

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. Emilio Quaia
Department of Radiology, University of Padova, 35100 Padova, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, and other databases.

Journal Rank:

JCR - Q2 (Radiology, Nuclear Medicine and Medical Imaging)
