Advances in the Radiography of Prostate Cancer

Message from the Guest Editor

Today, PET/CT has a profound influence on diagnostic work in prostate cancer, where MR alone was the leading technology for a decade. The possibility of PET/MR has not, or not yet, resulted in a major change to this modality. This may be due both to the relative paucity of PET/MR and inherent difficulties in the technology. Not least, the new treatment possibility with protein receptor radionuclides has produced amazing results in clinical trials, and they are on the verge of marketing authorization, possibly changing the prognosis of a vast number of patients. There is a plentitude of potential new knowledge, leaving us with a number of stones unturned, hence this Special Issue. Papers of high academic standard addressing these and related topics are invited to this Special Issue. We are looking for results from clinical and preclinical studies and papers identifying unmet needs or challenges related to the field of imaging and nuclear-medicine-based therapeutics.

Guest Editor

Dr. Tore Bach-Gansmo

Department of Radiology and Nuclear Medicine, University Hospital of North Norway, 9019 Tromsø, Norway

Deadline for manuscript submissions

closed (30 December 2022)

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. Emilio Quaia
Department of Radiology, University of Padova, 35100 Padova, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, and other databases.

Journal Rank:

JCR - Q2 (Radiology, Nuclear Medicine and Medical Imaging) Rapid Publication: manuscripts are peer-reviewed and a first decision is provided to authors approximately 26.7 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the first half of 2025).
