Current Trends in Diagnostic and Therapeutic Imaging of Brain Tumors

Message from the Guest Editors

Brain tumors encompass a broad range of diagnoses including relatively low-grade lesions, highly aggressive high-grade tumors, and metastases, but a common theme in evaluation and treatment of these tumors is the use of imaging to aid diagnosis, treatment, and patient follow-up. Brain imaging plays a critical role in clinical decision-making, but even the most sophisticated currently available techniques in magnetic resonance imaging (MRI), positron emission tomography (PET), and molecular imaging leave room for improvement. Higher quality imaging is needed to better quantify the scope of disease and to aid decision-making during longitudinal therapy, both of which are currently limited with mainstream clinical techniques. Furthermore, imaging can guide therapy with techniques such as stereotactic radiosurgery, laser ablation, and high-intensity ultrasound. This issue focuses on reviews of current state-of-the-art imaging techniques for improving care of brain tumor patients. Cutting-edge imaging methods as well as guided therapies such as ultrasound technologies that enhance the blood-brain delivery of key therapeutic agents are within the scope of this Special Issue.

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. Emilio Quaia
Department of Radiology, University of Padova, 35100 Padova, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, and other databases.

Journal Rank:

JCR - Q2 (Radiology, Nuclear Medicine and Medical Imaging) Rapid Publication: manuscripts are peer-reviewed and a first decision is provided to authors approximately 26.7 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the first half of 2025).
