Special Issue

New Advances in Optical Coherence Tomography Angiography (OCTA)

Message from the Guest Editor

It is my pleasure to present a Special Issue on the topic of new advances in optical coherence tomography angiography (OCTA). We are witnessing a new era of technical progress in ophthalmic imaging, in which OCTA is increasingly becoming an important pillar for our daily clinical approach. OCTA has been proven to be a highly sensitive tool to detect microvascular abnormalities in ocular, but also systemic diseases. There is growing interest in the potential use of OCTA-based biomarkers. The present Special Issue focuses on a broad range of research and clinical applications to which OCTA can be applied, according to the most updated developments. Both original research papers and review articles are welcome.

Author Benefits

Open Access:
free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:
indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, and other databases.

Journal Rank:
JCR - Q2 (Radiology, Nuclear Medicine and Medical Imaging) Rapid Publication: manuscripts are peer-reviewed and a first decision is provided to authors approximately 26.7 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the first half of 2025).
