Special Issue

Neuro-Imaging in Parkinson's Disease

Message from the Guest Editor

Neuro-Imaging in Parkinson's Disease (PD) is in a phase of rapid evolution. From molecular imaging to PETbased imaging, to multi-modal MRI, neuroimaging in PD has reached a critical mass of investigative capacity. The ability of neuroimaging to diagnose, monitor response to treatment, and predict symptom development in PD has made important strides. This has resulted not only in an improved understanding of PD itself, but also in imaging tools with utility in the clinic and in clinical research. Thus, this is a fertile and opportune time to review the past, present, and future of neuroimaging in PD, including consideration of the field through the lens of the NIH, industry, basic science, and clinical/translational science perspectives. Papers addressing these topics are invited for this Special Issue, especially those combining a high academic standard coupled with a focus on identifying the remaining challenges in the field and suggesting pathways forward.

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. Emilio Quaia

Department of Radiology, University of Padova, 35100 Padova, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, and other databases.

Journal Rank:

JCR - Q2 (Radiology, Nuclear Medicine and Medical Imaging) Rapid Publication: manuscripts are peer-reviewed and a first decision is provided to authors approximately 26.7 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the first half of 2025).
