A Geography of Unconventional Tourist Mobility: New Approaches and Methodologies

Message from the Guest Editors

Unconventional tourism is an umbrella term that covers most kinds of unregistered or unaccounted tourist mobilities, some of which might not appear to be 'tourism' but should be in certain localities and under certain conditions. Given the growth of unregistered tourist flows and unaccounted leisure (or utilitarian) mobilities, there is a need in tourism studies to apply innovative research methods and to reconceptualize the meanings of tourism in different geographical and social contexts. It is expected that people's craving for travel in the post-pandemic era will educe new spatial and temporal tourism experiences and behaviors in which unconventional tourisms will play an important role. To better understand this phenomenon and to evaluate the development of new approaches to travel and behavioral spatialities, new ways of thinking, new theoretical constructs, and new methodologies are needed. This Special Issue seeks contributions that will explore unconventional tourism mobilities as described in all their forms, focusing on the geographical patterns, processes and hidden aspects of unconventional tourism.
