Message from the Guest Editors

The pollution of air, water, and soil with different materials, chemical products, and constantly increasing amounts of waste is a global issue. It is also considered that biodegradation in the environment occurs after or simultaneously with physical and chemical degradation, which modifies the pollutants’ structure to the molecular level, generating more and more waste through increasingly complex processes to control.

Therefore, the purpose of this special issue on "Advances in water, air and soil pollution monitoring, modeling and restoration" is to assess the air, water and soil pollution by different evaluation methods and to apply the finding for possible mitigation measures. The articles selected for this special issue will provide an overview of the actual research stage in the field, aiming to assess the risks and impact on the environment.

Besides the solutions to the practical problems of cleaning the water, air and soil, the selected topics will directly answer questions related to selecting different tools that best emphasize the environmental quality changes and their impact on society’s future.

Toxics (ISSN 2305-6304) is an international, peer-reviewed, open access journal which provides an advanced forum for studies related to all aspects of toxic chemicals and materials. We aim to publish high quality work that furthers our understanding of the exposure, effects, and risks of chemicals and materials in humans and the natural environment as well as approaches to assess and/or manage the toxicological and ecotoxicological risks of chemicals and materials. Please consider publishing in Toxics when preparing your next paper.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, AGRIS, and other databases.

Journal Rank: JCR - Q1 (Toxicology) / CiteScore - Q2 (Chemical Health and Safety)
