

Special Issue

Heavy Metal Induced Neurotoxicity

Message from the Guest Editor

The neurotoxicity of metals is an important topic, as metals can cause neurodevelopmental toxicities, cognitive and behavioral alterations, and neurodegeneration. The risk due to exposure of metals such as lead, cadmium, mercury and manganese, has been appreciated for some time; nevertheless, insights into their roles in disease processes and their mechanisms of action continue to be described. Furthermore, exposures to metals once thought to be safe or negligible, such as tungsten and the lanthanide series, are gaining more attention due to their increased industrial use. This Special Issue aims to investigate both novel roles for traditional neurotoxic metals, as well as describe neurotoxicities for previously understudied metals.

About the Journal

Message from the Editor-in-Chief

Toxics (ISSN 2305-6304) is an international, peer-reviewed, open access journal which provides an advanced forum for studies related to all aspects of toxic chemicals and materials. We aim to publish high quality work that furthers our understanding of the exposure, effects, and risks of chemicals and materials in humans and the natural environment as well as approaches to assess and/or manage the toxicological and ecotoxicological risks of chemicals and materials. Please consider publishing in *Toxics* when preparing your next paper.

Editor-in-Chief

Dr. Demetrio Raldúa

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, AGRIS, and other databases.

Journal Rank:

JCR - Q1 (Toxicology) / CiteScore - Q1 (Chemical Health and Safety)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 18.1 days after submission; acceptance to publication is undertaken in 1.9 days (median values for papers published in this journal in the first half of 2025).
