Risk Assessment of Emerging Pollutants in Soil

Message from the Guest Editor

Since the industrial revolution, the global economy has advanced rapidly, while the population has also increased dramatically. Urbanization and industrialization have led to increasingly serious environmental pollution, particularly in some developing countries. Pollutants emitted by anthropogenic activities such as printing and dyeing, the chemical industry, non-ferrous metal mining and smelting, etc., enter the soil via atmospheric deposition and surface runoff, causing ecological pollution, and also enter the human body via crops, threatening human health. In recent years, emerging pollutants, including perfluorinated compounds (PFC), carcinogenic polycyclic aromatic hydrocarbons (PAHs), and other persistent organic pollutants (POPs), have received widespread attention due to their high stability, bioaccumulation, and ecological toxicity. Therefore, it is necessary to establish the relevant risk assessment, migration and transformation mechanism, and source apportionment system for pollution management and control. About the Journal

Message from the Editor-in-Chief

Toxics (ISSN 2305-6304) is an international, peer-reviewed, open access journal which provides an advanced forum for studies related to all aspects of toxic chemicals and materials. We aim to publish high quality work that furthers our understanding of the exposure, effects, and risks of chemicals and materials in humans and the natural environment as well as approaches to assess and/or manage the toxicological and ecotoxicological risks of chemicals and materials. Please consider publishing in *Toxics* when preparing your next paper.

Editor-in-Chief

Dr. Demetrio Raldúa
Department Environmental Chemistry, IDAEA-CSIC, Jordi Girona 18,

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, AGRIS, and other databases.

Journal Rank:

JCR - Q1 (Toxicology) / CiteScore - Q1 (Chemical Health and Safety)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.8 days after submission; acceptance to publication is undertaken in 2.4 days (median values for papers published in this journal in the second half of 2025).
