Toxic Chemicals in Water: Occurrence and Potential Adverse Effects on the Environment and Human Health

Message from the Guest Editors

Toxic chemicals make a significant contribution to water pollution. Accordingly, their occurrence in water is a significant issue globally because of the persistence, low degradability, bioaccumulation, and poisonous nature of these chemicals, which lead to a cumulative impact on the ecosystem. Furthermore, some of these are included in the emerging category of toxicity of the endocrine disrupting chemicals (EDCs), which adversely impact humans and the environment's well-being. As a result, evaluation of their occurrence in water resources and risk assessment play a vital role in reducing the health hazards. Research areas may include (but are not limited to) the following: emerging contaminants, agrochemicals and food toxicology, ecotoxicology, drugs toxicity, human toxicology and epidemiology, exposome analysis and risk assessment, and toxicity reduction and environmental remediation sections. We also encourage manuscripts that propose new models and statistical techniques to assess the origin of water pollution, as well as unconventional approaches to evaluate the ecological and human health risks.

About the Journal

Message from the Editor-in-Chief

Toxics (ISSN 2305-6304) is an international, peer-reviewed, open access journal which provides an advanced forum for studies related to all aspects of toxic chemicals and materials. We aim to publish high quality work that furthers our understanding of the exposure, effects, and risks of chemicals and materials in humans and the natural environment as well as approaches to assess and/or manage the toxicological and ecotoxicological risks of chemicals and materials. Please consider publishing in *Toxics* when preparing your next paper.

Editor-in-Chief

Dr. Demetrio Raldúa

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, AGRIS, and other databases.

Journal Rank:

JCR - Q1 (Toxicology) / CiteScore - Q1 (Chemical Health and Safety)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.8 days after submission; acceptance to publication is undertaken in 2.4 days (median values for papers published in this journal in the second half of 2025).
