Effects of Chemical-Induced Organ Damage via Inducing Antioxidant Defense Responses

Message from the Guest Editors

Living organisms are continuously and inadvertently exposed to an array of insults that produce reactive oxygen species, eventually predisposing them to oxidative stress. Oxidative stress, an imbalance in the redox homeostasis of the cell, impacts almost all acute and chronic progressive disorders and, on a cellular basis, is intimately linked to aging, cardiovascular disease, cancer, immune function, metabolism, and neurodegeneration. A large body of evidence supports the notion that dietary antioxidants are useful protectors against oxidative stress and play an important role in preventing human diseases. Since oxidative stress is a complex condition, new insights into its cellular and molecular mechanisms in several organ systems and techniques and markers for assessing it are void areas that need to be filled by scientific contributions in these aspects. The purpose of this Special Issue is to encourage researchers to submit original research and review articles that address all aspects of environmental pollutants and their mechanisms of action linked with oxidative stress, inflammation, and cell death in human diseases or using animal models.

About the Journal

Message from the Editor-in-Chief

Toxics (ISSN 2305-6304) is an international, peer-reviewed, open access journal which provides an advanced forum for studies related to all aspects of toxic chemicals and materials. We aim to publish high quality work that furthers our understanding of the exposure, effects, and risks of chemicals and materials in humans and the natural environment as well as approaches to assess and/or manage the toxicological and ecotoxicological risks of chemicals and materials. Please consider publishing in *Toxics* when preparing your next paper.

Editor-in-Chief

Dr. Demetrio Raldúa
Department Environmental Chemistry, IDAEA-CSIC, Jordi Girona 18,

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, AGRIS, and other databases.

Journal Rank:

JCR - Q1 (Toxicology) / CiteScore - Q1 (Chemical Health and Safety)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.8 days after submission; acceptance to publication is undertaken in 2.4 days (median values for papers published in this journal in the second half of 2025).
