

## Special Issue

# Effects of Environmental Pollutants on Neurodevelopment

### Message from the Guest Editors

With the rapid development of the pharmaceutical industry, the incidence of infertility and preterm birth have risen sharply. In addition to congenital diseases, advanced-age maternal birth, social stress, and environmental factors are important influencing factors, including fine particular materials (PM2.5) of air pollution, environmental pollutants such as dimethylaniline (3,5 - DMA), and inflammatory factors (LPS). These affect conception, embryonic development, preterm birth, and congenital diseases. Previous studies have pointed out that LPS, 3,5-DMA, and PM2.5 affect fetal brain development, causing cortical stratification abnormalities and further affecting fetal behavioral expressions, such as memory and cognitive decline. This Special Issue aims to explore neuronal behavior alterations caused by and the molecular mechanisms involved in abnormal neurodevelopment caused by environmental pollutants. In addition, this Special Issue is focused on investigating whether there is a way to fight environmental factors so that the fetal brain can develop normally, as well as methods of protection of the subsequent development of neural function.

## About the Journal

### Message from the Editor-in-Chief

*Toxics* (ISSN 2305-6304) is an international, peer-reviewed, open access journal which provides an advanced forum for studies related to all aspects of toxic chemicals and materials. We aim to publish high quality work that furthers our understanding of the exposure, effects, and risks of chemicals and materials in humans and the natural environment as well as approaches to assess and/or manage the toxicological and ecotoxicological risks of chemicals and materials. Please consider publishing in *Toxics* when preparing your next paper.

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, AGRIS, and other databases.

#### Journal Rank:

JCR - Q1 (Toxicology) / CiteScore - Q2 (Chemical Health and Safety)

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 18.3 days after submission; acceptance to publication is undertaken in 2.3 days (median values for papers published in this journal in the second half of 2024).
