

## Special Issue

# Cadmium Pollution and Occupational Exposure

### Message from the Guest Editor

The renal and bone effects of cadmium exposure are well known, and there are also concerns about carcinogenicity and life prognosis. The main sources of exposure to cadmium are in occupations, e.g., battery manufacturing, alloys, and plating industries, and in the general environment, e.g., food and smoking. The health effects of cadmium exposure are a global concern and remain an issue for many researchers. This Special Issue is open to any subject area related to environmental and occupational exposure and the health effects of cadmium.

## About the Journal

### Message from the Editor-in-Chief

*Toxics* (ISSN 2305-6304) is an international, peer-reviewed, open access journal which provides an advanced forum for studies related to all aspects of toxic chemicals and materials. We aim to publish high quality work that furthers our understanding of the exposure, effects, and risks of chemicals and materials in humans and the natural environment as well as approaches to assess and/or manage the toxicological and ecotoxicological risks of chemicals and materials. Please consider publishing in *Toxics* when preparing your next paper.

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, AGRIS, and other databases.

#### Journal Rank:

JCR - Q1 (Toxicology) / CiteScore - Q1 (Chemical Health and Safety)

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 18.1 days after submission; acceptance to publication is undertaken in 1.9 days (median values for papers published in this journal in the first half of 2025).
