Persistent Organic Pollutants and Human Health

Message from the Guest Editor

Persistent organic pollutants (POPs) are a group of substances characterized by their high resistance to environmental degradation, their lipophilic nature, and their ability to alter physiological systems of living beings. Due to their potential damage to the environment and people, most of these substances were banned for decades. POPs are associated with different human diseases, including cancer, cardiovascular diseases or diabetes. Moreover, many of these compounds seem to alter fat metabolism and be partially responsible for the obesity epidemic that plagues the planet. It is a topic of total relevance which affects humans as a species and the total environment of the planet and that, therefore, still requires continuous research to answer the many questions that are not clarified.

About the Journal

Message from the Editor-in-Chief

Toxics (ISSN 2305-6304) is an international, peer-reviewed, open access journal which provides an advanced forum for studies related to all aspects of toxic chemicals and materials. We aim to publish high quality work that furthers our understanding of the exposure, effects, and risks of chemicals and materials in humans and the natural environment as well as approaches to assess and/or manage the toxicological and ecotoxicological risks of chemicals and materials. Please consider publishing in *Toxics* when preparing your next paper.

Editor-in-Chief

Dr. Demetrio Raldúa
Department Environmental Chemistry, IDAEA-CSIC, Jordi Girona 18,

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, AGRIS, and other databases.

Journal Rank:

JCR - Q1 (Toxicology) / CiteScore - Q1 (Chemical Health and Safety)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 18.1 days after submission; acceptance to publication is undertaken in 1.9 days (median values for papers published in this journal in the first half of 2025).
