

Special Issue

Occurrence, Fate and Transport of Marine Pollutants

Message from the Guest Editor

The pollution of marine environments by human activities has become an increasingly serious issue. A large number of pollutants raise grave concerns for the health of both marine ecosystems and humans, via the consumption of contaminated seafood. It is of great significance to explore the occurrence, fate, bioaccumulation and biomagnification of marine pollutants and to evaluate the ecological risk of pollutants for protecting the marine environment and promoting the sustainable development of the ocean. In this Special Issue, we aim to focus on various marine pollutants, particularly those that pose a threat to the environment and human health. Relevant research can focus on the occurrence, fate and transport process of marine pollutants, as well as the assessment of environmental effects and ecological risks of pollutants.

About the Journal

Message from the Editor-in-Chief

Toxics (ISSN 2305-6304) is an international, peer-reviewed, open access journal which provides an advanced forum for studies related to all aspects of toxic chemicals and materials. We aim to publish high quality work that furthers our understanding of the exposure, effects, and risks of chemicals and materials in humans and the natural environment as well as approaches to assess and/or manage the toxicological and ecotoxicological risks of chemicals and materials. Please consider publishing in *Toxics* when preparing your next paper.

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, AGRIS, and other databases.

Journal Rank:

JCR - Q1 (Toxicology) / CiteScore - Q1 (Chemical Health and Safety)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 18.1 days after submission; acceptance to publication is undertaken in 1.9 days (median values for papers published in this journal in the first half of 2025).
