Environmental Exposures and Epidemiology Studies

Message from the Guest Editors

As is well known, exposure assessment generally includes information on the source and identity of chemical agents, the concentration of each toxicant in various media, and the toxicity of identified toxicants as defined in experimental studies. Thus, environmental exposure epidemiological methods examine the association between the effects of environmental agents on human health. Environmental epidemiology, on the other hand, is more often used to conduct hypothesis-based research that seeks to examine vulnerable populations or communities to clarify the relationship between adverse health effects and physical, biological, and chemical factors. Environmental exposures for the purposes of epidemiological research may broadly focus on exposure assessment for site remediation, mitigation, control, human health risk assessment, etc. Environmental exposures and epidemiological studies are needed to examine exposure to toxics and health effects and improve the availability of evidence for driving environmental policies to mitigation and prevention of environmental toxics in various media (air, water, food, and objects) presenting risks to human health.

About the Journal

Message from the Editor-in-Chief

Toxics (ISSN 2305-6304) is an international, peer-reviewed, open access journal which provides an advanced forum for studies related to all aspects of toxic chemicals and materials. We aim to publish high quality work that furthers our understanding of the exposure, effects, and risks of chemicals and materials in humans and the natural environment as well as approaches to assess and/or manage the toxicological and ecotoxicological risks of chemicals and materials. Please consider publishing in *Toxics* when preparing your next paper.

Editor-in-Chief

Dr. Demetrio Raldúa
Department Environmental Chemistry, IDAEA-CSIC, Jordi Girona 18,
08034 Barcelona, Spain

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, AGRIS, and other databases.

Journal Rank:

JCR - Q1 (Toxicology) / CiteScore - Q1 (Chemical Health and Safety)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 18.1 days after submission; acceptance to publication is undertaken in 1.9 days (median values for papers published in this journal in the first half of 2025).
