

## Special Issue

# Fish Models for Human Toxicology

### Message from the Guest Editors

Whereas many of the human toxidromes have already been modeled in rodents, only a few models have been developed and conveniently validated in fish. This Special Issue on “Fish Models for Human Toxicology” aims to highlight the research into the development and validation of human toxidromes using well-established fish models in biomedicine, such as zebrafish or medaka. We are also interested in studies using fish models to increase our current mechanistic understanding of human toxidromes, identifying new potential therapeutic targets and developing more effective therapies. Authors are invited and welcome to submit original research papers, reviews, and short communications.

## About the Journal

### Message from the Editor-in-Chief

*Toxics* (ISSN 2305-6304) is an international, peer-reviewed, open access journal which provides an advanced forum for studies related to all aspects of toxic chemicals and materials. We aim to publish high quality work that furthers our understanding of the exposure, effects, and risks of chemicals and materials in humans and the natural environment as well as approaches to assess and/or manage the toxicological and ecotoxicological risks of chemicals and materials. Please consider publishing in *Toxics* when preparing your next paper.

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, AGRIS, and other databases.

#### Journal Rank:

JCR - Q1 (Toxicology) / CiteScore - Q1 (Chemical Health and Safety)

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 18.1 days after submission; acceptance to publication is undertaken in 1.9 days (median values for papers published in this journal in the first half of 2025).
