Message from the Guest Editor

In order to promptly identify an attack with biological agents, reasonably good assays for a range of biological toxins must be available. Nevertheless, the immense diversity of microorganisms and toxins represents a major challenge. As a consequence, there is a pressing need for rapid, standardized methods that ensure the detection of a broad spectrum of potential biological weapons in a quantitative fashion. It is also essential to standardize analytical tools and produce reliable reference materials. Moreover, botulinum toxin is also available in licensed drugs for the treatment of a variety of medical disorders, in addition to its increased use in cosmetic and aesthetic medicine. A wide range of available in vitro analytical tools are currently employed globally for the detection and measurement of biological toxins' potency, as well as for countermeasures assessment. However, there is also a need to reduce the use of animals globally. The evaluation of currently available in vitro methods for the detection of biological toxins and the replacement of animal models will have a great impact on public health and economy.

Message from the Editor-in-Chief

Toxinology is an incredibly diverse area of study, ranging from field surveys of environmental toxins to the study of toxin action at the molecular level. The editorial board and staff of *Toxins* are dedicated to providing a timely, peer-reviewed outlet for exciting, innovative primary research articles and concise, informative reviews from investigators in the myriad of disciplines contributing to our knowledge on toxins. We are committed to meeting the needs of the toxin research community by offering useful and timely reviews of all manuscripts submitted. Please consider *Toxins* when submitting your work for publication.

Author Benefits

Open Access: free for readers, with **article processing charges (APC)** paid by authors or their institutions.

High Visibility: indexed within **Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Embase, CAPlus / SciFinder, AGRIS, and other databases.**

Journal Rank: JCR - Q1 (*Toxicology*) / CiteScore - Q1 (*Toxicology*)
