Deadline for manuscript  
submissions:

**closed (31 January 2022)**

### Message from the Guest Editors

The mycotoxin produced by the secondary metabolism of agricultural and foodborne important fungi is a low molecular weight but highly toxic compound and a significant hazard for human and animal health. These compounds occur naturally in the environment, but their production is increased due to various natural and synthetic environmental stressors that can modulate the oxidative status of the fungal cell. Oxidative stress is one of the main factors that triggers mycotoxin biosynthesis in fungal cells. Also, climate change is important in those metabolic pathways since it strongly negatively regulates environmental factors and thus shapes the fungal community in the environment and mycotoxin production. A constant evaluation of mycotoxin risk is needed as insurance for a minimization of the adverse effects caused by environmental stress factors of any kind. Such processes can be evaluated on a molecular and genetic level, but with the same aim of establishing mechanisms that are able to control and reduce contamination of the environment with mycotoxins.

The SI shall cover all the important topics related to mycotoxin production influenced by stressors from the environment.

## Message from the Editor-in-Chief

Toxinology is an incredibly diverse area of study, ranging from field surveys of environmental toxins to the study of toxin action at the molecular level. The editorial board and staff of *Toxins* are dedicated to providing a timely, peer-reviewed outlet for exciting, innovative primary research articles and concise, informative reviews from investigators in the myriad of disciplines contributing to our knowledge on toxins. We are committed to meeting the needs of the toxin research community by offering useful and timely reviews of all manuscripts submitted. Please consider *Toxins* when submitting your work for publication.

## Author Benefits

**Open Access:** free for readers, with **article processing charges (APC)** paid by authors or their institutions.

**High Visibility:** indexed within **Scopus**, **SCIE (Web of Science)**, **PubMed**, **MEDLINE**, **PMC**, **Embase**, **CAPLus / SciFinder**, **AGRIS**, and **other databases**.

**Journal Rank:** **JCR - Q1 (Toxicology) / CiteScore - Q1 (Toxicology)**
