Special Issue

Bacillus thuringiensis: A Broader View of Its Biocidal Activity

Message from the Guest Editors

Bacillus thuringiensis (Bt) is the best-characterized Gram-positive entomopathogenic bacterium with many strains bearing plasmids containing a wide variety of insecticidal genes. This has bestowed Bt-based products as the most marketed microbial insecticides to date. The encoded insecticidal proteins include both crystal and vegetative insecticidal proteins highly toxic against a wide range of invertebrates, with several of them incorporated into crops conferring resistance to some of the most destructive insect pest species worldwide. However, insects targeted by Bt crops have been subjected continuously to selective pressures and started showing resistance to some of the most used insecticidal proteins, which has promoted worldwide screening programs for strains harboring novel insecticidal proteins intended both to overcome insect resistance and to broaden host ranges. This Special Issue will address either the description of isolated Bt strains nor insecticidal proteins showing novel biocidal activities, which can be used not only for delaying/overcoming insect resistance but also for enlarging host spectrums.

About the Journal

Message from the Editor-in-Chief

Toxinology is an incredibly diverse area of study, ranging from field surveys of environmental toxins to the study of toxin action at the molecular level. The editorial board and staff of *Toxins* are dedicated to providing a timely, peer-reviewed outlet for exciting, innovative primary research articles and concise, informative reviews from investigators in the myriad of disciplines contributing to our knowledge on toxins. We are committed to meeting the needs of the toxin research community by offering useful and timely reviews of all manuscripts submitted. Please consider *Toxins* when submitting your work for publication.

Editor-in-Chief

Prof. Dr. Jay Fox
Department of Microbiology, University of Virginia, Charlottesville, VA, USA

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Embase, CAPlus / SciFinder, AGRIS, and other databases.

Journal Rank:

JCR - Q1 (Toxicology) / CiteScore - Q1 (Toxicology)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 18.4 days after submission; acceptance to publication is undertaken in 2.8 days (median values for papers published in this journal in the first half of 2025).
