Paralytic Shellfish Toxins: Analysis, New Analogs, Toxicology, Vectors, and Impacts in Wildlife

Message from the Guest Editors

Paralytic shellfish toxins (PSTs) are a group of natural neurotoxic alkaloids that can cause paralytic shellfish poisoning (PSP). PSP is characterized by neurological symptoms that vary from mild to severe and can even result in death. PSTs bioaccumulate in certain marine biota, are transferred throughout aquatic food webs, and can be vectored to humans. This Special Issue is open to original research articles and reviews dealing with PSTs and the following subjects: - new analytical methods (substantial modifications of internationally validated/well-established methods or their application to new matrixes);- development of new reference materials;- identification and characterization of new congeners;- toxicological studies;- the impact of PSTs on wildlife and new reports in non-traditional vectors;- novel detection tools of PSTs production in marine environmental samples;- biosynthetic pathways and gene regulation of PSTs; and- toxinological studies leading to unveil environmental conditions or genetically determined factors responsible for differences in PSTs profiles between groups or strains from the same taxon.

About the Journal

Message from the Editor-in-Chief

Toxinology is an incredibly diverse area of study, ranging from field surveys of environmental toxins to the study of toxin action at the molecular level. The editorial board and staff of *Toxins* are dedicated to providing a timely, peer-reviewed outlet for exciting, innovative primary research articles and concise, informative reviews from investigators in the myriad of disciplines contributing to our knowledge on toxins. We are committed to meeting the needs of the toxin research community by offering useful and timely reviews of all manuscripts submitted. Please consider *Toxins* when submitting your work for publication.

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Embase, CAPlus / SciFinder, AGRIS, and other databases.

Journal Rank:

JCR - Q1 (Toxicology) / CiteScore - Q1 (Toxicology)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 20.3 days after submission; acceptance to publication is undertaken in 2.9 days (median values for papers published in this journal in the second half of 2024).
