Botulinum Neurotoxin as Novel Therapy of Spasticity and Disorder Movement

Message from the Guest Editor

Strong evidence has been established for the use of botulinum neurotoxin therapy for spasticity resulting from conditions such as brain injury and some degenerative diseases. Additionally, it has been suggested that incorporating rehabilitation and adjunctive therapies can not only improve spasticity but also enhance overall functionality. In this Special Issue, we provide readers with various rehabilitation approaches, adjunctive therapies, and treatment strategies related to botulinum toxin therapy.

About the Journal

Message from the Editor-in-Chief

Toxinology is an incredibly diverse area of study, ranging from field surveys of environmental toxins to the study of toxin action at the molecular level. The editorial board and staff of *Toxins* are dedicated to providing a timely, peer-reviewed outlet for exciting, innovative primary research articles and concise, informative reviews from investigators in the myriad of disciplines contributing to our knowledge on toxins. We are committed to meeting the needs of the toxin research community by offering useful and timely reviews of all manuscripts submitted. Please consider *Toxins* when submitting your work for publication.

Editor-in-Chief

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Embase, CAPlus / SciFinder, AGRIS, and other databases.

Journal Rank:

JCR - Q1 (Toxicology) / CiteScore - Q1 (Toxicology)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 18.4 days after submission; acceptance to publication is undertaken in 2.8 days (median values for papers published in this journal in the first half of 2025).
