

## Special Issue

# The Role of Botulinum and Other Clostridial Neurotoxins in Central Nervous System

### Message from the Guest Editors

This Special Issue aims to describe and prove BoNTs-related effects on the CNS in different neurological and non-neurological conditions and their positive, therapeutic but also potentially negative clinical implications. Another aim is to elucidate the potential mechanisms involved in these central effects. Human studies based on clinical observations, neurophysiological investigations, or neuroimaging studies are welcome, as well as animal studies and experimental models. In this Special Issue, original research articles and reviews are both encouraged.

## About the Journal

### Message from the Editor-in-Chief

Toxinology is an incredibly diverse area of study, ranging from field surveys of environmental toxins to the study of toxin action at the molecular level. The editorial board and staff of *Toxins* are dedicated to providing a timely, peer-reviewed outlet for exciting, innovative primary research articles and concise, informative reviews from investigators in the myriad of disciplines contributing to our knowledge on toxins. We are committed to meeting the needs of the toxin research community by offering useful and timely reviews of all manuscripts submitted. Please consider *Toxins* when submitting your work for publication.

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Embase, CAPlus / SciFinder, AGRIS, and other databases.

#### Journal Rank:

JCR - Q1 (Toxicology) / CiteScore - Q1 (Toxicology)

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 18.4 days after submission; acceptance to publication is undertaken in 2.8 days (median values for papers published in this journal in the first half of 2025).
