Special Issue

Phytopathogenic Fungi and Toxicity

Message from the Guest Editors

Phytopathogen fungi are responsible for serious plant diseases which might negatively affect crop productivity. Some of these fungi are also documented as opportunist human pathogens that cause infection in immunocompromised individuals. In this respect, fungal interaction with other organisms is of great interest because fungi employ an array of biochemical and mechanical strategies to infect the host in order to access nutrients. During infection, polymer-degrading enzymes or secondary metabolites are produced as virulence factors. Furthermore, fungi produce mycotoxins on crops, and this represents a considerable risk to human and animal health. In addition, phytopathogen fungi have also been studied as biocontrol agents against pests or for the capacity to produce compounds with a wide variety of biological activity, such as herbicidal, antibiotic, and antifungal activities. Studies of phytopathogen fungi might be interesting to understand the mechanism of fungal pathogenicity and virulence and to develop strategies for screening of disease and for the application of natural compounds with bioactivities.

About the Journal

Message from the Editor-in-Chief

Toxinology is an incredibly diverse area of study, ranging from field surveys of environmental toxins to the study of toxin action at the molecular level. The editorial board and staff of *Toxins* are dedicated to providing a timely, peer-reviewed outlet for exciting, innovative primary research articles and concise, informative reviews from investigators in the myriad of disciplines contributing to our knowledge on toxins. We are committed to meeting the needs of the toxin research community by offering useful and timely reviews of all manuscripts submitted. Please consider *Toxins* when submitting your work for publication.

Editor-in-Chief

Prof. Dr. Jay Fox
Department of Microbiology, University of Virginia, Charlottesville, VA, USA

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Embase, CAPlus / SciFinder, AGRIS, and other databases.

Journal Rank:

JCR - Q1 (Toxicology) / CiteScore - Q1 (Toxicology)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 19.5 days after submission; acceptance to publication is undertaken in 2.8 days (median values for papers published in this journal in the second half of 2025).
