Special Issue

Advances in Transplant Infectious Diseases

Message from the Guest Editors

Solid organ transplants (SOTs) are life-saving interventions. New potent immunosuppressive strategies have enabled transplantations in high immunological risk patients, retransplantations, or ABOincompatible transplantations at the expense of an increased recipients' susceptibility to various infections. Despite targeted prophylaxis, surveillance, and risk stratification, infectious complications remain a major cause of morbidity and a principal cause of death in this population. SOT recipients experience a high burden of infections with a specific temporal pattern, with rare opportunistic pathogens and a predominance of bacteria. In this Special Issue, we will address the whole spectrum of infectious complications in SOT recipients, including bacterial, fungal, and viral infections. Comprehensive reviews, as well as research (be it basic, translational, or clinical research) or interesting case series or case reports are welcome, with the aim of providing readers with an up-to-date view on the screening, prophylaxis, diagnosis, and management of transplant infectious diseases.

Author Benefits

High Visibility:

indexed within Scopus, and other databases.

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 38.9 days after submission; acceptance to publication is undertaken in 8.1 days (median values for papers published in this journal in the first half of 2025).

Recognition of Reviewers:

APC discount vouchers, optional signed peer review, and reviewer names published annually in the journal.
