Strategies for Access to Kidney Transplantation for Highly Sensitized and Incompatible Patients

Message from the Guest Editor

Historically, the lack of adequate strategies and powerful immunosuppressants make it impossible or an unacceptable risk level for kidney transplant in highly immunized patients or in the case of ABO incompatible pairs. The aim of this Special Issue is to describe new strategies and new drugs that allow for such high-risk transplantation. Several trials are, to date, ongoing and should be described in detail. We are soliciting papers describing these new drugs as well as new strategies. Strategies related to the Exchange Programmes (KEP) should also be the object of some papers. In particular, KEP allows transplantation between ABO incompatible pairs.

Author Benefits

High Visibility:

indexed within Scopus, and other databases.

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 38.9 days after submission; acceptance to publication is undertaken in 8.1 days (median values for papers published in this journal in the first half of 2025).

Recognition of Reviewers:

APC discount vouchers, optional signed peer review, and reviewer names published annually in the journal.
