Special Issue

Antimicrobial Resistance, Treatment Options and Prevention Strategies

Message from the Guest Editors

Antimicrobial resistance (AMR) is a significant and increasing burden on healthcare systems globally. This was highlighted by the UNGA special meeting in 2024, where countries recommitted to working to slow down rates of resistance, decrease mortality, improve infection prevention and control (IPC) practices, and commit to research into innovative treatment options. This Special Issue covers the topic of antimicrobial resistance, focusing on treatment approaches and experiences, as well as perspectives on implementing programs and practices to help reduce the burden of AMR in both community and hospital settings. We invite submissions ranging from original research papers and reviews to case reports submitted by healthcare providers, microbiologists, public health specialists, epidemiologists, and social scientists, which will contribute to the knowledge pool of AMR and improve treatment and prevention strategies.
