# **Special Issue**

# **Global Burden of Viral Hepatitis**

# Message from the Guest Editors

The burden caused by viral hepatitis remains high in several populations and is predicted to remain a significant public health problem in the near future. However, up-to-date studies estimating the burden of viral hepatitis from different perspectives, including epidemiology, diagnosis, pathogenesis, natural history, linkage to care, treatment and prevention, are important to assess the current state of viral hepatitis and progress in the prevention and control efforts at national, regional and global levels. This Special Issue, the "Global Burden of Viral Hepatitis", aims to assemble a novel collection of valuable resources for the medical and scientific community. Contributions in the form of original research, short communications and reviews are welcome.
