Special Issue

New Perspectives in Tuberculosis Prevention and Control

Message from the Guest Editor

Tuberculosis remains a significant public health concern worldwide, despite progress in reducing morbidity and mortality over the past two decades. The WHO estimates that 10.6 million new TB cases emerged in 2022, a 9% decline from 2015. However, achieving the 2030 target of reducing TB incidence by 80% compared to 2015 seems unlikely at the current rate of reduction. Effective interventions to reduce TB incidence exist but are not optimally implemented. New perspectives on optimizing and effectively implementing these interventions can help national TB programs scale up their efforts. These perspectives can also assist the global community in meeting ambitious TB targets by 2035. We invite you to submit your research related to any of the mentioned interventions to our Special Issue on "New Perspectives in Tuberculosis Prevention and Control." This Special Issue will be widely circulated among researchers, academicians, and policymakers involved in TB control to promote research uptake and cross-learning.

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. John Frean

Pathologist, Parasitology Reference Lab, Centre for Emerging Zoonotic and Parasitic Diseases, National Institute for Communicable Diseases, University of the Witwatersrand, Johannesburg 2192, South Africa

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, Informit, and other databases.

Journal Rank:

JCR - Q1 (Tropical Medicine) / CiteScore - Q2 (Public Health, Environmental and Occupational Health)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 20.6 days after submission; acceptance to publication is undertaken in 3.1 days (median values for papers published in this journal in the first half of 2025).
