# New Insights in Human African Trypanosomiasis

### Message from the Guest Editors

The elimination of human African trypanosomiasis (HAT), or 'sleeping sickness', in the Sub-Saharan countries where it is endemic is in sight, thanks to extensive efforts by health personnel and the governments of endemic countries, together with the coordinated support of international partners under the leadership of the WHO. Many actors have innovated and identified issues that need to be shared with the broader community working towards the elimination of HAT. Our intention with this monograph is to give space and a voice to those working in the field whose experiences could inform the work of others, making future responses to HAT even more effective, in the present context of low prevalence, where treating the remaining small number of cases needed for complete elimination will be increasingly difficult. We welcome researches, including clinical and social science, economic impact and perspectives, epidemiology, and elimination policy.

## About the Journal

### Message from the Editor-in-Chief

---

#### Editor-in-Chief

Prof. Dr. John Frean

Pathologist, Parasitology Reference Lab, Centre for Emerging Zoonotic and Parasitic Diseases, National Institute for Communicable Diseases, University of the Witwatersrand, Johannesburg 2192, South Africa

---

#### Author Benefits

##### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, Informit, and other databases.

##### Journal Rank:

JCR - Q1 (Tropical Medicine) / CiteScore - Q2 (Public Health, Environmental and Occupational Health)

##### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 20.6 days after submission; acceptance to publication is undertaken in 3.1 days (median values for papers published in this journal in the first half of 2025).
