Special Issue

Recent Progress in Mosquito-Borne Diseases

Message from the Guest Editors

Research into mosquito-borne diseases has made significant strides in recent years. A spotlight has been cast on diseases like malaria, dengue, Zika, yellow fever, and Chikungunya. Alongside these are other overlooked infections, including West Nile fever, leishmaniasis. filariasis, and onchocerciasis. Enhancements in epidemiological surveillance systems have been instrumental, facilitating guicker outbreak detection and a more streamlined response. In this regard, mapping systems that trace mosquito presence and dissemination patterns have been used, thereby aiding informed decision making. Epidemiological insights stem from both entomological taxonomic studies and the application of molecular biology tools for identifying and classifying insects and pathogens. This Special Issue, devoted to recent strides in mosquito-borne diseases, seeks to unite high-quality contributions that further knowledge across diverse domains connected to mosquito research, including ecological facets, epidemiological controls, and clinical diagnostics using varied techniques.

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. John Frean

Pathologist, Parasitology Reference Laboratory, Centre for Emerging Zoonotic and Parasitic Diseases, National Institute for Communicable Diseases, University of the Witwatersrand, Johannesburg 2192, South Africa

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, Informit, and other databases.

Journal Rank:

JCR - Q1 (Tropical Medicine) / CiteScore - Q2 (Public Health, Environmental and Occupational Health)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 20.6 days after submission; acceptance to publication is undertaken in 3.1 days (median values for papers published in this journal in the first half of 2025).
