Emerging Insights in Pathogenesis of Infectious Protozoa and Algae

Message from the Guest Editor

Today, more than twenty species of protozoa are documented as pathogens and claim a million deaths annually while more than a billion people are infected. The phylogenetically and structurally diverse group of unicellular pathogens undergo a complex life cycle, making protozoan infections challenging to prevent and treat. Moreover, the appearance of drug-resistant strains and increasing cases in new regions is a growing concern, especially when the invention of new antiprotozoals has not been as fruitful. Therefore, this Special Issue aims to compile and organize current knowledge on the pathogenesis of protozoa, including rare species, to promote the development of effective means to prevent, diagnose, and treat protozoan infections. Similarly, in addition to protozoa, we also invite articles that present new perspectives in medical phycology, notably protothecosis of achlorophyllic alga, *Prototheca*. Although phylogenetically distant, non-photosynthetic *P. wickerhamii* and free-living amoebae share common ground in treatment schemes. We envision the two research areas bringing new findings and relevant ideas that mutually benefit and take the research to the next level.

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. John Frean

Pathologist, Parasitology Reference Lab, Centre for Emerging Zoonotic and Parasitic Diseases, National Institute for Communicable Diseases, University of the Witwatersrand, Johannesburg 2192, South Africa

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, Informit, and other databases.

Journal Rank:

JCR - Q1 (Tropical Medicine) / CiteScore - Q2 (Public Health, Environmental and Occupational Health)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 20.6 days after submission; acceptance to publication is undertaken in 3.1 days (median values for papers published in this journal in the first half of 2025).
