

Special Issue

Holistic Approach to Tuberculosis Detection, Treatment and Prevention, Volume II

Message from the Guest Editors

Although it is mostly preventable and curable, approximately 10 million people develop tuberculosis disease, resulting in a million deaths every year globally. For the first time in several decades, we are on the brink of having a shorter treatment regimen for the treatment of drug-sensitive TB (DS-TB) and a novel TB vaccine that would prevent TB disease in adults. As we look forward to TB elimination and meeting TB goals, evidence-based approaches would be the key. This Special Issue on “Holistic Approach to Tuberculosis Detection, Treatment and Prevention, Volume II” invites submissions on evidence-based approaches to ending TB, including active case-finding approaches, TB preventive treatment, and a holistic biosocial approach to TB elimination with global relevance. A broad range of research methodologies will be accepted, including qualitative, epidemiology, operational, implementation, and policy research, as well as other relevant approaches.

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. John Frean

Pathologist, Parasitology Reference Laboratory, Centre for Emerging Zoonotic and Parasitic Diseases, National Institute for Communicable Diseases, University of the Witwatersrand, Johannesburg 2192, South Africa

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, Informit, and other databases.

Journal Rank:

JCR - Q1 (Tropical Medicine) / CiteScore - Q2 (Public Health, Environmental and Occupational Health)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 22.2 days after submission; acceptance to publication is undertaken in 3.8 days (median values for papers published in this journal in the second half of 2025).
