

Special Issue

Virology and Pathogenesis of Human Herpesviruses Infection

Message from the Guest Editors

Herpesviruses (HHVs) are a group of viruses widely spread among human populations, with over 90% of adults having been infected by one or more types of herpesviruses. Herpesvirus infection is linked to multiple types of diseases, including cancers, chickenpox, shingles, mononucleosis, cold sores, and genital herpes, etc. This Special Issue aims to expand knowledge on the virology and epidemiology of all human herpesviruses, the role of herpesviruses in the pathogenesis of specific diseases, and the contribution of potential underlying mechanisms towards triggering the development of these disorders, while also opening new avenues to the possible therapeutic use of antiherpetic drugs able to block illness progression. Research articles, communications, and reviews are welcome.

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. John Frean

Pathologist, Parasitology Reference Lab, Centre for Emerging Zoonotic and Parasitic Diseases, National Institute for Communicable Diseases, University of the Witwatersrand, Johannesburg 2192, South Africa

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, Informit, and other databases.

Journal Rank:

JCR - Q1 (Tropical Medicine) / CiteScore - Q2 (Public Health, Environmental and Occupational Health)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 20.6 days after submission; acceptance to publication is undertaken in 3.1 days (median values for papers published in this journal in the first half of 2025).
