# **Special Issue**

# Viral Hepatitis: Current Status and Future Perspective

# Message from the Guest Editors

Viral hepatitis affects hundreds of millions of people worldwide. As part of the Agenda for Achieving Sustainable Development Goals 2030, a World Health Organization (WHO) global hepatitis strategy endorsed by all WHO Member States, a goal to eliminate viral hepatitis as a major public health threat by 2030 was set. Five hepatotropic viruses cause the main types of viral hepatitis: hepatitis A virus (HAV), hepatitis B virus (HBV), hepatitis C virus (HCV), hepatitis D (delta) virus (HDV), and hepatitis E virus (HEV). These variants all lead to liver disease of variable severity and differ in geographical distribution, transmission routes, and prevention methods. This Special Issue aims to address (but not exclusively) the following topics of interest: 1) the epidemiology and molecular epidemiology of viral hepatitis in key populations; 2) viral hepatitis and coinfections: 3) genetic variability and the emergence of clinically relevant variants; 4) advances in diagnostic methods; 5) new insights into prevention, management, and control of viral hepatitis; 6) new therapeutics findings; 7) natural history and host immune response.

# **Author Benefits**

# **High Visibility:**

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, Informit, and other databases.

## **Journal Rank:**

JCR - Q1 (Tropical Medicine) / CiteScore - Q2 (Public Health, Environmental and Occupational Health)

# **Rapid Publication:**

manuscripts are peer-reviewed and a first decision is provided to authors approximately 20.6 days after submission; acceptance to publication is undertaken in 3.1 days (median values for papers published in this journal in the first half of 2025).
