

Special Issue

Spatial Infectious Disease Epidemiology

Message from the Guest Editor

Spatial infectious disease epidemiology is an emerging field in epidemiology that includes a variety of analytical approaches to investigate the spatial distribution of infectious diseases, such as bacterial, viral and parasitic diseases, and their demographic, environmental, climatic, behavioural and socioeconomic risk factors. The Special Issue “**Spatial Infectious Disease Epidemiology**” welcomes high-quality original research and review articles in the broad subject area of spatial or spatiotemporal analysis/modelling of bacterial, viral and parasitic diseases, including tuberculosis, HIV, malaria, dengue, cholera, measles, schistosomiasis, leptospirosis, influenza, chikungunya, Zika, Ebola, MERS-CoV, SARS, COVID -19, hepatitis B, hepatitis C, soil-transmitted helminths, neglected tropical diseases, sexually transmitted diseases and other emerging and re-emerging infectious diseases. We are particularly interested in papers focusing on geospatial analyses of data, models explaining spatial or spatiotemporal patterns of infectious diseases and analyses that incorporate a spatial component within the model.

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. John Frean

Pathologist, Parasitology Reference Lab, Centre for Emerging Zoonotic and Parasitic Diseases, National Institute for Communicable Diseases, University of the Witwatersrand, Johannesburg 2192, South Africa

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, Informit, and other databases.

Journal Rank:

JCR - Q1 (Tropical Medicine) / CiteScore - Q2 (Public Health, Environmental and Occupational Health)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 20.6 days after submission; acceptance to publication is undertaken in 3.1 days (median values for papers published in this journal in the first half of 2025).
