Tuberculosis in Special Populations: Epidemiology and Evidence-Based Interventions

Message from the Guest Editors

Tuberculosis (TB) continues to be a global public health emergency, with 10.8 million people reported with having TB disease and 1.25 million lives being lost in 2023 (global tuberculosis report 2024, World Health Organization 2024). Despite progress, the world is not in track to end TB by 2030. While TB can affect anyone, special populations are more vulnerable to TB infection and disease. Special populations include children, people living with HIV, those suffering from malnutrition or diabetes mellitus, migrants, miners, prisoners and pregnant women, among others. This Special Edition aims to provide a state-of-the-art summary of global knowledge on epidemiology and evidence-based interventions which have successfully served special populations and revamped efforts to end TB. We encourage the submission of papers from national programmes, communities affected by TB, researchers, scientists, public health practitioners, clinicians and global health and laboratory experts.

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. John Frean

Pathologist, Parasitology Reference Laboratory, Centre for Emerging Zoonotic and Parasitic Diseases, National Institute for Communicable Diseases, University of the Witwatersrand, Johannesburg 2192, South Africa

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, Informit, and other databases.

Journal Rank:

JCR - Q1 (Tropical Medicine) / CiteScore - Q2 (Public Health, Environmental and Occupational Health)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 20.6 days after submission; acceptance to publication is undertaken in 3.1 days (median values for papers published in this journal in the first half of 2025).
