Special Issue

Advances in Malaria Treatment and Prevention

Message from the Guest Editors

Malaria is a potentially fatal mosquito-borne disease caused by *Plasmodium* spp. Humans have suffered from the disease for thousands of years. The discovery of DDT and chloroquine ignited hope of conquering the disease, and the first global malaria eradication program initiated by World Health Organization was started in the mid 1950s. However, this ambitious program was soon terminated in 1967 due to the development of insecticide resistance in vectors and drug resistance in parasites. The Special Issue "Advances in Malaria Treatment and Prevention" aims to publish original research articles and review articles related to the treatment and prevention of malaria in order to provide updates on progress in these topics and to raise awareness of this important disease.

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. John Frean

Pathologist, Parasitology Reference Lab, Centre for Emerging Zoonotic and Parasitic Diseases, National Institute for Communicable Diseases, University of the Witwatersrand, Johannesburg 2192, South Africa

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, Informit, and other databases.

Journal Rank:

JCR - Q1 (Tropical Medicine) / CiteScore - Q2 (Public Health, Environmental and Occupational Health)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 20.6 days after submission; acceptance to publication is undertaken in 3.1 days (median values for papers published in this journal in the first half of 2025).
