# New Drug Formulations for Chagas's Disease Treatment

# Message from the Guest Editors

This Special Issue, titled "New Drug Formulations for Chagas's Disease Treatment," aims to gather highquality papers on the main pharmaceutical strategies to control Trypanosoma cruzi infection, which causes Chagas disease in humans. According to the World Health Organization, Chagas disease has global importance as this parasitic infection is present in various countries across different continents, and there is still no effective treatment for its chronic phase in humans. The parasite's high genetic diversity and varying drug susceptibilities across different countries partially contribute to this issue. We invite researchers from pharmaceutical and tropical medicine fields to submit original and review manuscripts showcasing the latest developments in this area. We kindly request your assistance in encouraging colleagues and experts to contribute to this Special Issue. We expect manuscripts to cover various stages of formulation development, technological and biological testing such as in vitro screening, and pre-clinical and clinical phases using diverse in vitro and in vivo models.

Pathologist, Parasitology Reference Laboratory, Centre for Emerging Zoonotic and Parasitic Diseases, National Institute for Communicable Diseases, University of the Witwatersrand, Johannesburg 2192, South Africa

# **Author Benefits**

# **High Visibility:**

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, Informit, and other databases.

# **Journal Rank:**

JCR - Q1 (Tropical Medicine) / CiteScore - Q2 (Public Health, Environmental and Occupational Health)

# **Rapid Publication:**

manuscripts are peer-reviewed and a first decision is provided to authors approximately 20.6 days after submission; acceptance to publication is undertaken in 3.1 days (median values for papers published in this journal in the first half of 2025).
