

## Special Issue

# COVID-19 Variants, Vaccines and New Waves

### Message from the Guest Editor

During the past few years, COVID-19 has had a massive impact on human health all over the globe. It is evident that the Delta and the Omicron variants created unprecedented public health calamity. COVID-19 vaccines are universally believed to be one of the most effective weapons to halt the pandemic. Though it is anticipated that the pandemic will have subsided by late 2023, the situation is extremely dynamic, and scientists and experts remain vigilant, observing trends to identify the emergence of any new waves. Therefore, a clear understanding of the current situation and forecasted trends of COVID-19 is incredibly important, and further studies on SARS-CoV-2 variants and the vaccines are of great value for public health planning. We also welcome any studies related but not limited to SARS-CoV-2 variants, COVID-19 epidemiology, vaccine effectiveness, vaccine hesitancy, and vaccine prioritization. It is hoped that a better understanding on these issues will lead to better policy decisions that address any pandemics that may occur in the future.

## About the Journal

### Message from the Editor-in-Chief

---

#### Editor-in-Chief

Prof. Dr. John Frean

Pathologist, Parasitology Reference Lab, Centre for Emerging Zoonotic and Parasitic Diseases, National Institute for Communicable Diseases, University of the Witwatersrand, Johannesburg 2192, South Africa

---

#### Author Benefits

##### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, Informit, and other databases.

##### Journal Rank:

JCR - Q1 (Tropical Medicine) / CiteScore - Q2 (Public Health, Environmental and Occupational Health)

##### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 20.6 days after submission; acceptance to publication is undertaken in 3.1 days (median values for papers published in this journal in the first half of 2025).
