

Special Issue

Epidemiology of Dengue: Past, Present and Future

Message from the Guest Editor

This Special Issue of the journal seeks contributions from authors who can advance our understanding of how dengue has emerged, the current extent and clinical impact of the epidemic, and how it may behave in the future. We are especially interested in papers that describe the epidemic in the Pacific and Southeast Asian regions. There are now several exciting tools to limit the spread of infection, including vaccines at various stages of development and deployment, the use of modified mosquito vectors and new insights in the deployment of traditional mosquito control measures. We would like to hear from authors in affected countries as to how these measures have impacted on their epidemics. We welcome any other contributions relating to dengue including but not restricted to: Clinical manifestations of dengue fever; management of the complications of dengue fever (and the use of new clinical criteria); therapeutics; vector biology; blood safety; diagnostics and public health interventions.

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. John Frean

Pathologist, Parasitology Reference Lab, Centre for Emerging Zoonotic and Parasitic Diseases, National Institute for Communicable Diseases, University of the Witwatersrand, Johannesburg 2192, South Africa

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, Informit, and other databases.

Journal Rank:

JCR - Q1 (Tropical Medicine) / CiteScore - Q2 (Public Health, Environmental and Occupational Health)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 20.6 days after submission; acceptance to publication is undertaken in 3.1 days (median values for papers published in this journal in the first half of 2025).
