

Joint Special Issue

Diarrheagenic Pathogens and Gastrointestinal Infections

Message from the Guest Editor

This Special Issue aims to address new developments in the epidemiology, clinical features, diagnostic techniques (including comparative diagnostic studies), treatment, prevention, and control of acute, persistent, and chronic infectious disorders of the gastrointestinal tract in individuals living in or returning from the tropics. Basic research on the pathogenesis of specific intestinal infections will be considered, as well as clinical, diagnostic, epidemiological, and cost-effectiveness studies assessing enteric pathogens in a variety of settings. Manuscripts addressing specific treatment and control interventions, including therapeutic trials and vaccine studies, are also of high interest.

Keywords

- Acute, persistent and chronic diarrhea
- Clinical features and diagnostic techniques
- Digestive disorders
- Enteric pathogens (bacteria, helminths, intestinal protozoa, viruses)
- Epidemiology and spatial mapping
- Gastrointestinal infections
- Neglected tropical diseases
- Treatment, prevention, and control
