

Special Issue

A Multiwavelength View of Supernovae

Message from the Guest Editor

The goal of this Special Issue is to summarize recent multiwavelength results for supernovae. We aim to have papers describing results for individual SNe at various wavelengths, as well as review papers summarizing results at specific wavelengths. We also aim to include a description of theoretical processes, analysis of various emission signatures, and investigations of SN evolution and interactions with the circumstellar medium. Overall, we hope that this Special Issue will encapsulate the current state of SN research, summarize the observational results, and outline the physics necessary to understand the observations.

About the Journal

Message from the Editor-in-Chief

The multidisciplinary journal *Universe* is aiming to follow and, hopefully, to lead to the largest extent as possible the ever-self renovating threads which weave mathematical theories with our understanding of the magnificent natural world. On behalf of all the distinguished members of the Advisory and Editorial Boards, I extend my welcome to this journal and look forward to hearing from the interested contributors and learning about their valuable research.

Editor-in-Chief

Prof. Dr. Lorenzo Iorio
