

Special Issue

Urban Water Resources Assessment and Environmental Governance

Message from the Guest Editor

- Urbanization is a defining trend in the 21st century, with cities housing over 55% of the global population and projected to grow further in the coming decades. Urban water systems are critical to supporting economic growth, public health, and environmental well-being. However, these systems are under strain from climate change, aging infrastructure, and rapid population growth, leading to vulnerabilities in water supply, quality, and distribution. Addressing these challenges requires integrated and adaptive approaches that consider governance frameworks, resilient infrastructure, and innovative adaptation strategies.
- The aim of this Special Issue is to explore innovative approaches and cutting-edge research on the intersection of urban water systems, environmental governance, and resilience planning. By addressing the scientific and practical aspects of urban water management, this issue aims to foster interdisciplinary dialogue and highlight solutions that ensure the sustainability of urban water resources in an era of global change.
- I look forward to receiving your contributions.

About the Journal

Message from the Editor-in-Chief

Urban Science is a scholarly international journal which provides a platform for the exchange of theories, ideas, methods, analyses, and comparative studies of urban and regional development. It is a peer-reviewed, open access journal that publishes high quality original articles, theoretical essays, critical reviews, research notes, and shorter communications. Its broad definition of “science” includes both quantitative and qualitative methods of social, environmental, and spatial analysis. There is no restriction on the maximum length of the papers.

Editor-in-Chief

Prof. Dr. Luis Hernández-Callejo

Department of Agricultural and Forestry Engineering, University of Valladolid, Campus Duques de Soria, 42004 Soria, Spain

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, ESCI (Web of Science) and other databases.

Journal Rank:

JCR - Q1 (Geography) / CiteScore - Q2 (Urban Studies)
