Message from the Guest Editor

Dear Colleagues,

Although the vaccination is one of the effective protection against COVID-19 through the rapid development of COVID-19 pandemic, the unexpected adverse events (AEs) of vaccination has not been systematically reported.

In order to identify adverse reactions after COVID-19 vaccination, safety studies considering various covariates, such as race, age, and specific diseases, are needed. In particular, research to secure safety for adolescents and children, as well as high-quality clinical studies to understand the association of side effects with cardiovascular diseases, such as diabetes, is urgent from a health perspective.

Message from the Editor-in-Chief

Vaccines (ISSN 2076-393X), founded in 2013, now has a firm history of publishing peer-reviewed, state-of-the-art research papers on vaccines and vaccination in the broadest sense. Areas covered include, but are not limited to, novel and emerging vaccine technologies, building on in-depth knowledge of what constitutes a protective immune response. These can be new vaccines for old diseases, or old vaccines for new diseases. Vaccines against cancer and autoimmune diseases explicitly are also within the scope of the journal. Because public opinion and even government policies towards vaccines and vaccination have changed, vaccine policy and public health issues are major concerns. Climate change will also have an impact on the spread of infectious diseases, and thus also on vaccine and vaccination policies worldwide.

Author Benefits

Open Access: free for readers, with **article processing charges (APC)** paid by authors or their institutions.

High Visibility: indexed within **Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.**

Journal Rank: JCR - Q2 (Medicine, Research and Experimental) / CiteScore - Q1 (Pharmacology (medical))
