Message from the Guest Editor

Dear Colleagues,

A vaccine is a biological preparation made by bacteria, viruses, tumor cells, etc., which can make the body produce specific immunity and make the recipient obtain immunity through vaccination. According to the purpose of vaccination, there are two main categories: prophylactic vaccine and therapeutic vaccine

The United States leads the world in vaccine research. This Special Issue is devoted to the frontiers in vaccine research in the USA and showing American vaccine work worldwide. All submissions related to vaccine research from the USA are welcome.

This Special Issue will publish full research articles, reviews, and highly rated manuscripts related to vaccines.

Message from the Editor-in-Chief

Vaccines (ISSN 2076-393X), founded in 2013, now has a firm history of publishing peer-reviewed, state-of-the-art research papers on vaccines and vaccination in the broadest sense. Areas covered include, but are not limited to, novel and emerging vaccine technologies, building on in-depth knowledge of what constitutes a protective immune response. These can be new vaccines for old diseases, or old vaccines for new diseases. Vaccines against cancer and autoimmune diseases explicitly are also within the scope of the journal. Because public opinion and even government policies towards vaccines and vaccination have changed, vaccine policy and public health issues are major concerns. Climate change will also have an impact on the spread of infectious diseases, and thus also on vaccine and vaccination policies worldwide.

Author Benefits

Open Access: free for readers, with **article processing charges (APC)** paid by authors or their institutions.

High Visibility: indexed within **Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.**

Journal Rank: JCR - Q2 (Medicine, Research and Experimental) / CiteScore - Q1 (Pharmacology (medical))
