Molecular Biosciences, The
University of Queensland, St.
Lucia, QLD, Australia

Message from the Guest Editors

Current vaccination strategies against influenza are clearly inadequate, primarily due to the ever-changing nature of the influenza viruses. Thus, a significant clinical need exists for better influenza vaccines that can provide broader and long-lasting protection not only in healthy individuals but also in highly susceptible groups such as the elderly. This Special Issue of *Vaccines* will cover all aspects of influenza vaccines in the hope that new ideas and latest results will aid development of better vaccination strategies against influenza infections.

Message from the Editor-in-Chief

Vaccines (ISSN 2076-393X) has had a 6-year history of publishing peer-reviewed state of the art research that advances the knowledge of immunology in human disease protection. Immunotherapeutics, prophylactic vaccines, immunomodulators, adjuvants and the global differences in regulatory affairs are some of the highlights of the research published that have shaped global health. Our open access policy allows all researchers and interested parties to immediately scrutinize the rigorous evidence our publications have to offer. We are proud to present the work and perspectives of many to contribute to future decisions concerning human health.

Author Benefits

Open Access: free for readers, with **article processing charges (APC)** paid by authors or their institutions.

High Visibility: indexed within **Scopus**, **SCIE (Web of Science)**, **PubMed**, **PMC**, **Embase**, **CAPLus / SciFinder**, and **other databases**.

Journal Rank: JCR - Q2 (Medicine, Research and Experimental) / CiteScore - Q1 (Pharmacology (medical))
