Message from the Guest Editors

Three years after the spread of SARS-CoV-2, the virus responsible for the last global pandemic event, we can take stock of the past, present, and future of the SARS-CoV-2 virus. This includes, on one hand, the about 7 million deaths around the world caused by the virus (though this number could be an underestimation), but also, on the other, the vast range of pharmacological measures and vaccine options that did not exist in 2020. Because of the pandemic, health systems globally bordered on collapse, having to deal with extreme numbers of simultaneous cases. The situation today is far more manageable, though the virus continues to circulate and remains challenging to eradicate.

The topics that I invite you to reflect on are as follows:

1. The impact of vaccination on the general population;
2. The impact of vaccination on the elderly population;
3. The impact of vaccination on the population of so-called fragile subjects (immunosuppressed, sick, those with oncological problems or heart disease, etc.).

Message from the Editor-in-Chief

Vaccines (ISSN 2076-393X), founded in 2013, now has a firm history of publishing peer-reviewed, state-of-the-art research papers on vaccines and vaccination in the broadest sense. Areas covered include, but are not limited to, novel and emerging vaccine technologies, building on in-depth knowledge of what constitutes a protective immune response. These can be new vaccines for old diseases, or old vaccines for new diseases. Vaccines against cancer and autoimmune diseases explicitly are also within the scope of the journal. Because public opinion and even government policies towards vaccines and vaccination have changed, vaccine policy and public health issues are major concerns. Climate change will also have an impact on the spread of infectious diseases, and thus also on vaccine and vaccination policies worldwide.

Author Benefits

Open Access: free for readers, with **article processing charges (APC)** paid by authors or their institutions.

High Visibility: indexed within **Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.**

Journal Rank: JCR - Q2 (Medicine, Research and Experimental) / CiteScore - Q1 (Pharmacology (medical))
